T Cell Responses in Human Health and Disease - Second Edition

Message from the Guest Editor

Single-cell technologies, most importantly, single-cell transcriptomics, have entered human immunology and provided more insights into the heterogeneity of lymphocyte populations, thus unmasking novel players in disease pathogenesis and their respective phenotypes, functions and regulatory checkpoints. Investigations in the area of human immunology have also shifted from the blood to the peripheral tissues. We consider these tissue-resident T cells (TRM) to be critical for host defence, cancer and autoimmunity. And insights into identity of TRM cells in humans are just beginning to emerge. While previous years of human T cell research have centred on T cell stability versus plasticity and on cytokine networks, we now consider T cells to be more malleable with a multitude of external signals from the microenvironment. This includes not only their microbial antigens but also metabolites and even ionic signals. Taken together, human immunology has entered the centre stage in translational research due to its great impact on human health and disease. This Special Issue invites you to share your expertise in this research topic.

About the Journal

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Editors-in-Chief

Dr. Alexander E. Kalyuzhny

Dental Basic Sciences, University of Minnesota, 308 Harvard St. SE,
Minneapolis, MN 55455, USA

Prof. Dr. Cord Brakebusch

Biotech Research & Innovation Centre, The University of Copenhagen,
Copenhagen, Denmark

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
