

## Special Issue

# Feature Papers in "Stem Cells" 2023

### Message from the Guest Editors

Embryonic stem cells (ESCs), induced pluripotent stem cells (iPSCs), and adult stem cells hold great promise for future cell replacement therapies. The development of these stem cells requires in-depth knowledge in understanding and controlling the mechanisms of stem cell maintenance and exit from the undifferentiated state in specific biomaterials that mimic in vivo niches. When grown in 3D, ESCs or iPSCs can recapitulate embryonic development as blastoids or organoids do, making them ideal for drug screening and genetic disease modeling. Although cells of the inner cell mass are in a transient state in the embryo and last just for a few days, it has been possible to capture their pluripotent fate in vitro. Indeed, they can be grown as cell lines indefinitely thanks to deep insights in the fundamental knowledge of their physiology. Adult stem cells on the other hand last throughout our entire life in specific physiological niches in our body but can typically be cultured in vitro only through limited number of population doublings. In this Special issue of *Cells*, we will gather articles and reviews on recent fundamental and applied advances on ESC, iPSCs, and adult stem cells.

## About the Journal

### Message from the Editorial Board

*Cells* has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

---

### Editors-in-Chief

Dr. Alexander E. Kalyuzhny

Dental Basic Sciences, University of Minnesota, 308 Harvard St. SE,  
Minneapolis, MN 55455, USA

Prof. Dr. Cord Brakebusch

Biotech Research & Innovation Centre, The University of Copenhagen,  
Copenhagen, Denmark

---

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.5 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the second half of 2025).
