Special Issue

Cellular and Molecular Mechanisms of Wound Repair

Message from the Guest Editor

A coordinated sequence of cellular and molecular activities is required for the complicated and dynamic process of wound healing in order to restore tissue integrity. At the molecular level, numerous signaling molecules, including cytokines, chemokines, and growth factors, coordinate the interactions between different cell types, including immune cells, fibroblasts, keratinocytes, and endothelial cells. Important processes like angiogenesis, cell migration, proliferation, and extracellular matrix deposition are all regulated by this complex interaction. Developing cutting-edge therapeutic approaches, such as regenerative medicine and bioengineered skin substitutes, requires an understanding of the cellular and molecular principles underlying wound healing. Thus, we extend this invitation for you to submit a review or your original research findings to our Special Issue, titled "Cellular and Molecular Mechanisms of Wound Repair".

About the Journal

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Editors-in-Chief

Dr. Alexander E. Kalyuzhny
Dental Basic Sciences, University of Minnesota, 308 Harvard St. SE, Minneapolis, MN 55455, USA

Prof. Dr. Cord Brakebusch
Biotech Research & Innovation Centre, The University of Copenhagen, Copenhagen, Denmark

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
