New Advances in Cardiac and Vascular Physiology

Message from the Guest Editor

Our understanding of cardiac and vascular physiology and pathophysiology continues to evolve. The incidence of chronic heart failure is increasing, despite current best practices. The role of the immune system in the evolution of vascular injury such as aneurysms and in cardiac remodeling after stress or injury is not yet completely understood. The alpha-adrenergic receptor has a stronger role in cardiac responses than we previously believed. Cross-specialism understanding between cancer therapeutics and cardiac toxicity is increasingly valued. Information on the roles of new receptor families such as proton-sensing GPCRs is emerging. A pandemic has passed but left us with endemic exposures and unanswered questions about lasting cardiac and vascular effects. It is necessary to increase awareness around the long-term impact of environmental exposures as aggravating risks, as well as the current status of once-promising interventions. This Special Issue will provide comprehensive updates on a wide range of potential pathophysiological processes related to cardiac and vascular disease processes. We hope that you will consider joining us.

About the Journal

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Editors-in-Chief

Dr. Alexander E. Kalyuzhny

Dental Basic Sciences, University of Minnesota, 308 Harvard St. SE,
Minneapolis, MN 55455, USA

Prof. Dr. Cord Brakebusch

Biotech Research & Innovation Centre, The University of Copenhagen,
Copenhagen, Denmark

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
