

## Special Issue

# Alpha-Synuclein Pathology in Human Diseases

### Message from the Guest Editors

Alpha-synuclein insoluble protein aggregates are the key neuropathological characteristics of several neurodegenerative disorders. The protein is known as the main component of Lewy bodies (LB), intra-neuronal/parenchymal inclusions found in the post-mortem brains of patients affected by Parkinson's disease (PD), LB dementia (DLB), or the LB variant of Alzheimer's disease (LBVAD) as well as of glial cytoplasmic inclusions (GCI), which are instead oligodendrocyte inclusions typical of multiple system atrophy (MSA). Neurodegeneration with brain iron accumulation (NBIA) and pure autonomic failure (PAF) are other disorders characterized by central and peripheral alpha-synuclein pathological deposits. The gradual spreading and diffusion of alpha-synuclein pathological aggregates in and between the central and peripheral nervous system underlie the progression of disease symptoms in several of the above-cited disorders. This Special Issue aims at providing an overview on the impact of alpha-synuclein pathology deposition and spreading on neurodegenerative disorders.

## About the Journal

### Message from the Editorial Board

*Cells* has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

### Editors-in-Chief

Dr. Alexander E. Kalyuzhny

Dental Basic Sciences, University of Minnesota, 308 Harvard St. SE,  
Minneapolis, MN 55455, USA

Prof. Dr. Cord Brakebusch

Biotech Research & Innovation Centre, The University of Copenhagen,  
Copenhagen, Denmark

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
