

## Special Issue

# Autophagy Genes—Biological Functions

### Message from the Guest Editors

Dear colleagues, Autophagy is a process through which damaged or unnecessary cellular components are degraded by lysosomes. Autophagy generally plays a critical pro-survival role in cellular homeostasis by removing accumulated debris and by regulating adaptation to metabolic stress. However, under specific conditions, autophagy may trigger cell death and promote cancer progression. Autophagy-related (ATG) proteins are required throughout the multiple stages of autophagosome formation in “canonical” autophagy. ATG proteins were first identified in yeast and are well-conserved across organisms. Recent studies have revealed that they are also involved in “non-canonical” functions that do not involve classical autophagosome-lysosome fusion. These functions are critical to host-pathogen interactions and immune signaling. This Special Issue will address various biological functions of several different autophagy-related genes in relation to normal cellular physiology and the pathophysiology of human disease.

### Guest Editors

Prof. Dr. Sabah Hussain  
Dr. Gilles Gouspillou  
Dr. Jean-Philippe Leduc-Gaudet

### Deadline for manuscript submissions

closed (31 August 2022)

## About the Journal

### Message from the Editorial Board

*Cells* has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

---

### Editors-in-Chief

Dr. Alexander E. Kalyuzhny

Dental Basic Sciences, University of Minnesota, 308 Harvard St. SE,  
Minneapolis, MN 55455, USA

Prof. Dr. Cord Brakebusch

Biotech Research & Innovation Centre, The University of Copenhagen,  
Copenhagen, Denmark

---

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.5 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the second half of 2025).
