Special Issue

Autophagy Genes–Biological Functions

Message from the Guest Editors

Dear colleagues, Autophagy is a process through which damaged or unnecessary cellular components are degraded by lysosomes. Autophagy generally plays a critical pro-survival role in cellular homeostasis by removing accumulated debris and by regulating adaptation to metabolic stress. However, under specific conditions, autophagy may trigger cell death and promote cancer progression. Autophagy-related (ATG) proteins are required throughout the multiple stages of autophagosome formation in "canonical" autophagy. ATG proteins were first identified in yeast and are wellconserved across organisms. Recent studies have revealed that they are also involved in "non-canonical" functions that do not involve classical autophagosome formation or do not terminate with autophagosomelysosome fusion. These functions are critical to hostpathogen interactions and immune signaling. This Special Issue will address various biological functions of several different autophagy-related genes in relation to normal cellular physiology and the pathophysiology of human disease.

About the Journal

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Editors-in-Chief

Dr. Alexander E. Kalyuzhny Dental Basic Sciences, University of Minnesota, 308 Harvard St. SE, Minneapolis, MN 55455, USA

Prof. Dr. Cord Brakebusch Biotech Research & Innovation Centre, The University of Copenhagen, Copenhagen, Denmark

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
