Special Issue

Drought and Heat Stress Signalling Responses in Plants

Message from the Guest Editor

The heat waves of summer 2021 demonstrated the devastating effects of high temperatures on ecosystems at all levels, with especially damaging impacts on plant health. Drought further exacerbates the detrimental effects of heat waves by compromising plant adaptation mechanisms. It has been shown that while drought alone results in 19–50% yield losses, depending on geographical location, the combination of heat and drought can cause complete yield losses or devalue the produce. Considering the rise of annual average temperature and increasing demand for water resources from the growing population, the combination of drought and heat poses an existential threat to our lives. Hence, it is imperative to combine efforts in dissecting mechanisms of plant responses to these stresses on all levels. We anticipate this Issue will provide novel insights into molecular and cellular mechanisms of drought and heat responses, serving as a useful resource for the scientific community, industry, and everybody who cares about developing strategies and tools for improving plant resiliency.

About the Journal

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Editors-in-Chief

Dr. Alexander E. Kalyuzhny
Dental Basic Sciences, University of Minnesota, 308 Harvard St. SE, Minneapolis, MN 55455, USA

Prof. Dr. Cord Brakebusch
Biotech Research & Innovation Centre, The University of Copenhagen, Copenhagen, Denmark

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
