

## Special Issue

# CRISPR/Cas9: From the Bacteria to Widespread Advanced Genome Editing Tools in Mammalian Cells

### Message from the Guest Editors

Initially described as a defense mechanism of bacteria against invading phage viruses, CRISPR/Cas9 is now a leading tool for editing and regulation of gene function in mammalian cell's genome, surpassing other gene editing technologies, such as TALEN and ZFN, in terms of versatility and ease of targeting virtually any genomic locus. This innovating technology holds the promise of achieving precise modifications in the genome, broadening the application fields of CRISPR/Cas9 from gene functional studies to disease models and therapeutic concepts. Implementing such technology for treatment of human diseases, and, in particular, for malignant disorders, is a goal for which great efforts have been made in recent years. For further information, please visit the Special Issue [website](#).

### Guest Editors

Dr. Sergiu Chira

Prof. Dr. Yusuke Kamachi

Dr. Cecilia Bica

### Deadline for manuscript submissions

closed (31 January 2024)

## About the Journal

### Message from the Editorial Board

*Cells* has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

---

### Editors-in-Chief

Dr. Alexander E. Kalyuzhny

Dental Basic Sciences, University of Minnesota, 308 Harvard St. SE,  
Minneapolis, MN 55455, USA

Prof. Dr. Cord Brakebusch

Biotech Research & Innovation Centre, The University of Copenhagen,  
Copenhagen, Denmark

---

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
