

Special Issue

Inflammation, Oxidative Stress and Protein Aggregation; Any Links?

Message from the Guest Editors

Inflammation is a complex immune response that enables survival during infection and maintains tissue homeostasis. **Proteostasis** (proportion between the synthesis, translation, folding and degradation of proteins) should be in balance in a healthy cell, including neurons. **In this Special Issue** we propose: 1) to discuss how oxidative stress influences the inflammatory immune response; 2) studies of the regulatory pathways, which are turned on in the cytosol to restore proteostasis; and 3) studies which shed light on the connections between different stressors and the amount of protein aggregates, and the localization of the smallest, still soluble aggregates (oligomers), which are supposed to be the most toxic. Overall, by means of the proposed Special Issue, we expect to come closer to understanding the links between inflammatory response, oxidative stress and protein aggregation. Such knowledge may lead to common therapeutic targets to fight decreased proteostasis in aging or in neurodegenerative diseases.

About the Journal

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Editors-in-Chief

Dr. Alexander E. Kalyuzhny

Dental Basic Sciences, University of Minnesota, 308 Harvard St. SE,
Minneapolis, MN 55455, USA

Prof. Dr. Cord Brakebusch

Biotech Research & Innovation Centre, The University of Copenhagen,
Copenhagen, Denmark

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.5 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the second half of 2025).
