

Special Issue

Macrophages during Inflammation

Message from the Guest Editors

Macrophages are critical mediators of tissue homeostasis. They are generally considered to be one of the first lines of defense against pathogens, as they employ a range of strategies to phagocytose and kill pathogens and play important roles in orchestrating the protective inflammatory response through pattern recognition receptors. In addition, macrophages play an important role in removing cellular debris and repairing tissues. For this Special Issue entitled "Macrophages during Inflammation", we welcome the submission of original research and review articles covering a broad range of topics related to macrophage biology, including: host-pathogen interactions; molecular mechanisms for inflammatory signaling; plasticity; tolerance and trained immunity; immunomodulatory strategies; origins. This Special Issue may also include topics related to the implication of macrophages in the development of several human diseases: pulmonary, cardiovascular, or metabolic inflammatory diseases, neurodegeneration, aging, or cancer. We look forward to your contribution.

About the Journal

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Editors-in-Chief

Dr. Alexander E. Kalyuzhny

Dental Basic Sciences, University of Minnesota, 308 Harvard St. SE,
Minneapolis, MN 55455, USA

Prof. Dr. Cord Brakebusch

Biotech Research & Innovation Centre, The University of Copenhagen,
Copenhagen, Denmark

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
