Special Issue

Mitochondrial Functions in Stem Cells

Message from the Guest Editor

Regenerative cell-based therapies, such as infusion of stem cells or progenitor cells, have shown promising results in repairing damaged tissues in several organs. Mitochondria are intracellular organelles responsible for energy production that also regulate generation of reactive oxygen species, proliferation, apoptosis, and calcium homeostasis. Accumulating evidence suggests that mitochondria play critical roles in regulating multiple aspects of stem cell function, including their viability, plasticity, proliferative, and differential potential. However, the exact mechanisms by which these organelles modulate stem cell biology and function remain to be clarified. Understanding these mechanisms will aid the development of novel strategies to preserve mitochondrial structure and function and improve the efficacy and regenerative capacity of stem cells. We invite investigators to contribute original research articles and review articles that help us to get more insight into the role of mitochondria in stem cell function and the development of strategies to preserve these organelles.

About the Journal

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Editors-in-Chief

Dr. Alexander E. Kalyuzhny
Dental Basic Sciences, University of Minnesota, 308 Harvard St. SE, Minneapolis, MN 55455, USA

Prof. Dr. Cord Brakebusch
Biotech Research & Innovation Centre, The University of Copenhagen, Copenhagen, Denmark

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the second half of 2024).
