

## Special Issue

# Neuroinflammation Linked to Metabolic Disorders

### Message from the Guest Editor

Neuroinflammation is considered a potential causal factor for several brain-related diseases including neurodegenerative diseases. Indeed, the augmentation of pro-inflammatory cytokines is linked to many neurodegenerative pathways that are associated with depression and dementia. Besides, neuroinflammation is also linked to metabolic disorders. Metabolic disorders also named metabolic syndrome include diabetes and obesity are generally associated with low-grade inflammation. Neuroinflammation related to obesity has been considered to preferentially target the hypothalamus, but however, more recent studies reported that obesity-derived neuroinflammation could affect other brain areas such as the hippocampus, cortex, brainstem, or amygdala. It is noteworthy that metabolic disorders such as insulin resistance and obesity are also linked to neurodegenerative diseases most likely through neuroinflammatory mechanisms. The cellular and molecular mechanisms linking neuroinflammation to the onset of metabolic disorders are still poorly documented, especially the cross-talk between microglia and neurons/astrocytes/tanocytes, as well as the implicated signaling pathways.

## About the Journal

### Message from the Editorial Board

*Cells* has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

---

### Editors-in-Chief

Dr. Alexander E. Kalyuzhny

Dental Basic Sciences, University of Minnesota, 308 Harvard St. SE,  
Minneapolis, MN 55455, USA

Prof. Dr. Cord Brakebusch

Biotech Research & Innovation Centre, The University of Copenhagen,  
Copenhagen, Denmark

---

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
