

Special Issue

Pluripotent Stem Cells for Regenerative Medicine

Message from the Guest Editor

Human pluripotent stem cells are slowly but steadily transitioning from bench to bedside, with the first clinical trials showing promising results. Nevertheless, the spectrum of potentially treatable conditions is still limited, and issues such as genome instability and suboptimal differentiation are significant hurdles to the safe transition of these cells to the clinic. This Special Issue welcomes manuscripts providing insight on aspects relevant to the use of hPSC in regenerative medicine. We are interested in a wide range of work, including differentiation to novel cell types or improvement on existing cell types, and their preclinical testing. Work on biomaterials and scaffolding, with an eye for tissue engineering are also key for advanced hPSC-based therapy. Finally, work on safety, such as addressing the tumorigenic potential of hPSC-derived products, and scalability aspects, such as cell culture, are essential for the successful clinical application of these cells.

About the Journal

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Editors-in-Chief

Dr. Alexander E. Kalyuzhny

Dental Basic Sciences, University of Minnesota, 308 Harvard St. SE,
Minneapolis, MN 55455, USA

Prof. Dr. Cord Brakebusch

Biotech Research & Innovation Centre, The University of Copenhagen,
Copenhagen, Denmark

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the second half of 2024).
