Message from the Guest Editor

For a long time considered restricted to solid state materials and nanoparticles, photonic upconversion, in which low energy photons are piled up and restored as photons at higher energy, has recently reached the molecular scale with discrete molecular and supramolecular upconverting devices. This Special Issue aims at providing the most recent trends in this new area and will address the different aspects of molecular design, supramolecular assembling and fundamental photo-physical aspects of upconversion at the nanometer scale.

Deadline for manuscript
submissions:

15 February 2022

Special Issue

Editor-in-Chief

Prof. Dr. Edwin Charles Constable

Department of Chemistry,
University of Basel, Building 1096,
Mattenstrasse 24a, CH-4058
Basel, Switzerland

Message from the Editor-in-Chief

Chemistry is a broad science and in *Chemistry* we hope to showcase the excellence of this fundamental discipline. Open Access publishing allows scientists to publish their research in a way that reaches the widest possible audience. In *Chemistry* we aspire to build a genuinely transdisciplinary culture in which communication of results between scientists active in different areas and between scientists and the broader public highlights the benefits that chemistry can bring to society. We encourage papers on all aspects of chemistry ranging from astrochemistry to zoochemistry, with everything in between. We also very strongly welcome inter- and multidisciplinary papers which expand the subject beyond its present horizons. We also welcome themed issues collecting reviews and state-of-the-art papers in topical areas of chemical science.

Author Benefits

Open Access:— free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [ESCI \(Web of Science\)](#), [CAPus / SciFinder](#), and many [other databases](#).

Reliable service: rigorous peer review and professional production.
