### Message from the Guest Editors

- Studies on chemosensors for measuring taste and smell (i.e., electronic tongues and noses) started about 30 years ago. To date, progress on measurement principles, sensing materials, data analysis, and applications have been reported, making them useful tools for food and pharmaceutical industries. These sensing technologies are important in the responding to the diversity of taste and odor such as race, religion, culture, foodstuff, individual preferences and health in the food and pharmaceutical area, and so on.

In this Special issue, we will focus on the latest research on gustatory and olfactory sensing technologies and their applications. Both review articles and original research papers are solicited in, though not limited to, the following areas:

Electronic tongues;

Electronic noses;

Biosensors;

Sensing materials;

Data analysis;

Industrial applications;

Scent presentation.

## Message from the Editorial Board

*Chemosensors* continues to grow as a forum for all manners of sensing that encompass chemistry. *Chemosensors* is published in open access format – all articles and content are released on the internet immediately following acceptance, thus allowing unlimited access to the content as soon as it is published. We would be happy to have you join our growing list of authors.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [CAPlus / SciFinder](#), [Inspec](#), [Engineering Village](#) and [other databases](#).

**Journal Rank:** JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Physical and Theoretical Chemistry)
