## Novel 3D Printing Techniques for Microfluidic Systems

## Message from the Guest Editors

Microfluidics, also known as a micro-total analysis system, has been used in diverse applications, such as mineral processing, chemical synthesis, and tissue engineering. Moreover, 3D printing, formally known as additive manufacturing, serves as an alternative manufacturing method for microfluidic fabrication, due to its ability to produce complex and multi-level geometry. Furthermore, 3D printing has the ability to translate virtual designs into physical prototypes, with the help of computer-assisted modelling and simulations. Moreover, different working units can be introduced to the design to fabricate a microfluidic system with different functionalities. Functionalities such as chemical sensing or mechanical actuation can be incorporated into the system. The aim is to highlight different technologies and strategies that incorporate 3D printing into microfluidic fabrication. Authors are invited to submit their work exploring 3D-printed microfluidic devices, novel techniques in the fabrication of microfluidic systems, simulation models on 3Dprinted microfluidic devices through virtual and physical prototyping, integrating 3D-printed parts with microfluidic systems.

## About the Journal

## Message from the Editorial Board

*Chemosensors* continues to grow as a forum for all manners of sensing that encompass chemistry. *Chemosensors* is published in open access format – all articles and content are released on the internet immediately following acceptance, thus allowing unlimited access to the content as soon as it is published. We would be happy to have you join our growing list of authors.

## Editors-in-Chief

Prof. Dr. Jin-Ming Lin Beijing Key Laboratory of Microanalytical Methods and Instrumentation, Department of Chemistry, Tsinghua University, Beijing 100084, China

Prof. Dr. Nicole Jaffrezic-Renault Institute of UTINAM, University of Franche-Comté, UMR-CNRS 6213, 16 Gray Road, 25030 Besançon, France

## Author Benefits

### **High Visibility:**

indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, Inspec, Engineering Village and other databases.

### Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Physical and Theoretical Chemistry)

## **Rapid Publication:**

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20.5 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2025).
