

Special Issue

Analytical (Chem and Bio)sensors Based on EIS Measurements

Message from the Guest Editor

Electrochemical impedance spectroscopy (EIS) has been recognized as a method of overall characterization of electrode processes, faradaic and non-faradaic, providing broad time scale measurement. Research and development in analytical sensors area, focused on electrode materials, solvents and samples, usually take the advantage in the EIS examination. However, EIS with numerous data processing possibilities and/or data formats often can deliver superior observables for analytical purposes over dc currents recorded in amperometry/voltammetry, including square wave voltammetry and pulse voltammetry. This planned Special Issue of *Chemosensors* is intended to cover both aspects of EIS applications in analytical (chem and bio) sensors studies as a characterization tool and a method of analysis.

- models of electrochemical ac impedance
- EIS data formats
- faradaic and non-faradaic ac impedance measurements
- impedance, admittance, capacitance, modulus, electric permittivity
- EIS observables of analytical importance
- EIS applications for characterization of analytical sensors
- EIS applications providing new observables for analytical sensors
- chemical sensors
- biosensors

Guest Editor

Prof. Dr. Maria Grzeszczuk

Department of Chemistry, University of Wrocław, F. Joliot-Curie 14, 50-383 Wrocław, Poland

About the Journal

Message from the Editorial Board

Chemosensors continues to grow as a forum for all manners of sensing that encompass chemistry. *Chemosensors* is published in open access format – all articles and content are released on the internet immediately following acceptance, thus allowing unlimited access to the content as soon as it is published. We would be happy to have you join our growing list of authors.

Editors-in-Chief

Prof. Dr. Jin-Ming Lin

Beijing Key Laboratory of Microanalytical Methods and Instrumentation,
Department of Chemistry, Tsinghua University, Beijing 100084, China

Prof. Dr. Nicole Jaffrezic-Renault

Institute of UTINAM, University of Franche-Comté, UMR-CNRS 6213, 16
Gray Road, 25030 Besançon, France

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), CAPus / SciFinder, Inspec, Engineering Village and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Physical and Theoretical Chemistry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 19.1 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the second half of 2025).
