Topical Collection

Optical Chemosensors and Biosensors

Message from the Collection Editor

The field of chemo- and bio-sensors, ranging from biomedical/clinical applications to environmental applications and food analyses, has been growing as of two decades. In fact, in all of these fields, there is a arowing demand for rapid responses, guality control. usable devices, low-cost analyses, etc. All these features could lead to an improved healthy life, ranging from a more reliable and controlled guality of food and environment to a faster and more specific diagnosis. The optical detection methods used in chemo- and biosensors are based both on label-based or label-free techniques. The former ones make use, for example, of fluorescent or chemiluminescent-based detection systems, while the latter are based on direct optical detection of physical measurands, which are modified by chemical/biochemical reactions, such as the refractive index or the thickness or the density of the sensing layer at the surface where the interaction occurs. The aim of the Topical Collection is to collect new optical (label-free and label-based) chemo- and bio-sensors studies for biomedical/clinical, environmental applications and food analysis.

About the Journal

Message from the Editorial Board

Chemosensors continues to grow as a forum for all manners of sensing that encompass chemistry. *Chemosensors* is published in open access format – all articles and content are released on the internet immediately following acceptance, thus allowing unlimited access to the content as soon as it is published. We would be happy to have you join our growing list of authors.

Editors-in-Chief

Prof. Dr. Jin-Ming Lin Beijing Key Laboratory of Microanalytical Methods and Instrumentation, Department of Chemistry, Tsinghua University, Beijing 100084, China

Prof. Dr. Nicole Jaffrezic-Renault Institute of UTINAM, University of Franche-Comté, UMR-CNRS 6213, 16 Gray Road, 25030 Besançon, France

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, Inspec, Engineering Village and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Physical and Theoretical Chemistry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20.5 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2025).
