Protein Biomarker Detection Using Biosensing Systems

Message from the Guest Editors

The novel utilization of nanomaterials in making biosensors has acquired supreme importance in the field of biomedical engineering, which has led to advances in powerful, precise, and rapid response to the development of systemic diagnostic tools utilizing appropriate sensing elements for biosensors. Excellent electrochemical, fluorescence, optical, and chemical properties of nano-bio composite materials have found applications in biomedicine, drug delivery, imaging, ecological monitoring, and diagnostic equipment, and many more. The current Special Issue invites high-quality original research articles and review articles, focusing on advances in biosensors related to the detection of protein biomarkers.

About the Journal

Message from the Editorial Board

Chemosensors continues to grow as a forum for all manners of sensing that encompass chemistry. *Chemosensors* is published in open access format – all articles and content are released on the internet immediately following acceptance, thus allowing unlimited access to the content as soon as it is published. We would be happy to have you join our growing list of authors.

Editors-in-Chief

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), CAPus / SciFinder, Inspec, Engineering Village and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Physical and Theoretical Chemistry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 19.1 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the second half of 2025).
