Athens, Greece

Dr. Ilias Chatzioannidis

Papageorgiou General Hospital,
Thessaloniki, Greece

Deadline for manuscript
submissions:

5 September 2024

Message from the Guest Editors

Dear Colleagues,

Public health (PH) aims to protect and improve people's health and their communities, starting from childhood. PH strategies are obtained through research on diseases, healthy lifestyle promotion, and injury prevention and by detecting, preventing and acting on infectious diseases. The geographic coverage of a population may be as small as a neighborhood or as big as an entire country or world region, as the recent COVID-19 pandemic showed. PH involves preventive medicine (PM), which may start even before birth, through mother health assurance, promotion and education.

All types of research papers are welcome, such as original studies, review articles (especially systematic reviews and meta-analyses), epidemiological experiences from the COVID-19 pandemic, as well as, all state-of-the-art methods including the role of nutrition in children health. Furthermore, the contribution of cutting-edge technologies such as artificial intelligence (AI) and mobile technologies in all aspects of PH and PM for children are of special interest.
