Message from the Guest Editors

Dear Colleagues,

The Special Issue entitled “Radiologic Diagnosis of Urinary Tract and Kidney in Children” aims to contain valuable articles regarding the use of ultrasound, a non-invasive, non-irradiant method in diagnosis pediatric diseases. The focus is on urinary tract malformations in children from the neonatal to adult period using contrast agents such as Sonovue in detecting vesico-urinary reflux. In addition, rare pediatric cases will be discussed in this Special Issue from the clinicians’ point of view to the radiologists’ point of view. The content should convince both clinicians and radiologists to establish protocols for the follow-up of patients with urinary tract malformations.

Deadline for manuscript
