Prevention and Orthodontic Treatment of Malocclusion in Children

Message from the Guest Editors

Malocclusion is a prevalent condition in children that can impact oral health, facial appearance, and psychological behavior. Timely prevention and orthodontic care are essential in managing this issue, as they can help prevent more serious dental problems later on. When malocclusion is identified, orthodontic treatment, such as functional appliances, braces, or clear aligners, is often recommended. Early treatment can lead to better results by enhancing both the function and visual alignment of the teeth and jaws. By addressing malocclusion in its early stages, children can reduce the risk of problems like difficulty chewing and speaking and increased susceptibility to tooth decay and gum disease, contributing to improved long-term dental health. We invite original articles, systematic reviews, scoping reviews, and observational cohort studies to contribute to this Special Issue. We are looking forward to receiving your valuable submissions which will advance our knowledge in this field.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief
