Advances in Pediatric Autoinflammatory Disease

Message from the Guest Editor

Autoinflammatory diseases are a group of rare, inherited disorders with the first clinical signs presenting during childhood, leading to a significant burden on patients and their families due to uncontrolled inflammation, pain and organ damage. Advances in research on the genetic basis and immunological mechanisms behind these diseases have enhanced our understanding of autoinflammatory diseases and introduced new treatment possibilities. According to new knowledge, diseases such as chronic recurrent multifocal osteomyelitis and systemic juvenile idiopathic arthritis are categorized in the autoinflammatory spectrum of diseases. The aims of this Special Issue is to collect original research, reviews or mini reviews, as well as editorial papers that focus on advances in the genetics, epidemiology, diagnosis and management of autoinflammatory diseases in children.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney
Departments of Child Health and Neurology, University of Missouri, 400
Keene Street, Columbia, MO 65211, USA

Author Benefits
