

Special Issue

Prevention and Treatment of Spinal Cord Dysfunction in Children

Message from the Guest Editor

Pediatric-onset paralysis differs significantly from the adult-onset condition: its incidence is lower (and thus the ability to develop expertise is limited); etiologies are more abundant; co-morbidities are compounded through changes induced by growth; rehabilitation starts, in many cases, with habilitation; education and caregiving is an intricate part of the landscape; the social and economic context in which paralysis is contained evolves and transitions from the pediatric health care environment to the adult one. All these elements pose numerous problematic questions and challenges that can benefit from ongoing education and knowledge dissemination. These are the stated purposes of this Special Issue of *Children*. An additional aim is to foster collaborations that are diverse in terms of discipline and geography while also being inclusive. Children worldwide should benefit from expert knowledge.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney
Departments of Child Health and Neurology, University of Missouri, 400
Keene Street, Columbia, MO 65211, USA

Author Benefits

Open Access

— free for readers, with article processing charges (APC) paid by authors or their institutions.
