New Advances in Pediatric Liver Transplantation

Message from the Guest Editors

Liver transplantation (LT) is the established management of end-stage liver disease in children with good long-term graft and patient survival. Unfortunately, instances of liver graft loss are still common despite immunosuppressive regimens including newer antibodies, fusion proteins and low molecular weight drugs. Core needle biopsy of the liver remains the gold standard to diagnose abnormalities of the transplanted liver. Therefore, it is highly important to develop novel biomarkers and techniques that allow for quick and effective recognition of changes occurring in the liver allograft.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney

Departments of Child Health and Neurology, University of Missouri, 400 Keene Street, Columbia, MO 65211, USA

Author Benefits

Open Access

— free for readers, with article processing charges (APC) paid by authors or their institutions.
