

Special Issue

Child Trauma and Psychology

Message from the Guest Editors

The quality of the interactions established in the first years of human life is crucial and plays a significant role in the way we bond effectively and adapt personally and socially during adolescence and adulthood. Affective attachments mark the way in which people understand the world and regulate their emotions in the face of adversity.

Thus, traumatic experiences in childhood and adolescence may be related to a greater occurrence of internalizing and externalizing problems. It is common to find that children and adolescents who have been exposed to adverse situations exhibit mental health problems such as anxiety, depression, post-traumatic stress disorder, reactive attachment disorder, behavioral or hyperactive problems, and even neurodevelopmental problems.

The aim of this Special Issue on childhood is to highlight recent developments and innovative insights into the emotional, behavioral and neurological impact of trauma in childhood and adolescence. We seek to expand knowledge about assessment instruments, explanatory variables, and treatment and prevention options in this area.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney

Departments of Child Health and Neurology, University of Missouri, 400 Keene Street, Columbia, MO 65211, USA
