Youth Vulnerability and Maladjustment: A Look at Its Effects

Message from the Guest Editors

Our objective is to delve into how adverse experiences and clinical aspects interact in children, when violence becomes a reality that breaks with prosocial coexistence and clinical and social well-being.

Our task, is to analyze how violent behaviors that promote different responses are clinically and socially reinforced; on the one hand, those that are oriented towards a more competent, prosocial and clinically normative coexistence, and on the other hand, those that are oriented towards a more competent, prosocial and clinically normative coexistence; and on the other hand, those associated with situations of non-prosociality and clinical affectations.

Types of articles:

Research articles, such as (a) empirical studies (quantitative or qualitative), (b) theoretical articles, and (c) applied methodology articles;

Review articles that include (a) meta-analyses, (b) systematic reviews or narrative reviews, (c) critiques or reflections that deepen new theoretical frameworks, and (d) current debates on youth violence;

Replication of articles with emasculation of results and registered reports.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief
