Providing Care for Preterm Infants

Message from the Guest Editor

Preterm births are estimated to account for approximately 11% of all deliveries each year, and prematurity represents the leading worldwide cause of neonatal mortality and childhood mortality up to an age of five years. Providing care for preterm infants requires 1) improving prenatal care, 2) devising new strategies to improve survival for periviable infants, 3) identifying care bundles aiming at reducing the risk of adverse outcomes for extremely low-gestational-age infants, 4) defining care guidelines for the growing population of late preterm infants and 5) offering palliative care pathways for treatable-but-not-curable pathologies. To further the progress in preterm infants care, the application of translational medicine could offer new strategies for morbidity prevention and treatment, while the use of artificial intelligence could offer new diagnostic and monitoring tools. This Special Issue of *Children* aims to collect the results of scientific research to help clinicians improve their care for preterm newborns. Therefore, we wish for a precious collaboration and look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief
