Research Progress of Lung and Thoracic Abnormalities in Children

Message from the Guest Editor

The knowledge about and optimal treatment of pulmonary congenital anomalies and thoracic deformities are non-marginal parts of Pediatric Surgery, but unfortunately, due to the rarity of the presentation, achieving adequate learning curves and excellent levels of care is often difficult for Pediatric Surgeons. In addition, the operating indications are changing with time in light of new pathophysiological knowledges and what was once mandatory to operate on is now being questioned. The same applies to pulmonary sequestrations for example, and to the new orthotic treatments for pectus carinatum and excavatum (Vacuum Bell and corsets). The intent of this Special Issue is to take stock of the state of the art to date pulmonary and thoracic malformations in children. Many thanks in advance for your precious contributions.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney
Departments of Child Health and Neurology, University of Missouri, 400
