Parental Involvement in Neonatal and Infant Pain Prevention and Management: Evidence, Opportunities and Challenges

Message from the Guest Editors

A wealth of knowledge is available on effective and safe strategies for neonatal and infant pain prevention and management, such as skin-to-skin contact, breastfeeding, facilitated tucking, comforting/positioning, sweet solutions, topical anesthetics, and others. Importantly, parents can play an active role in pain management interventions, such as skin-to-skin contact, facilitated tucking and breastfeeding when feasible. However, to support parents in this role, they need knowledge and opportunities to participate in their children's pain management. This Special Issue welcomes original articles focusing on parental involvement in pain prevention and management in neonates and infants. Our goal is to highlight current research on the topic, strategies being implemented in diverse clinical settings, implementation science studies and future directions for research and practice. We anticipate a wide variety of research designs and methodologies and we encourage submissions authored in partnerships with parents and persons with lived experience.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney
Departments of Child Health and Neurology, University of Missouri, 400
Keene Street, Columbia, MO 65211, USA
