

Special Issue

Oral Disease Prevention and Treatment for Children and Adolescents

Message from the Guest Editors

“The doctor of the future will give no medication but will interest his patients in the care of the human frame, diet, and the cause and prevention of disease” (Thomas A. Edison, 1903). Good oral health has significant impact on an individual’s general health and well-being. Despite the progress that has been made in oral health awareness and education over the last few decades, oral diseases remain among the leading chronic diseases in children. In addition to caries, the most prevalent oral disease, periodontal diseases and malocclusions have tremendous impacts on both oral and general health. There is a need to shift from the traditional invasive dental treatment of children to a more personalized approach.

For this Special Issue, we welcome submissions of research papers, communications, reviews, and case reports addressing the themes of epidemiology, analysis of oral health care for children, oral health education, and the identification, screening, effective prevention, and non-invasive strategies for the management of oral diseases and malocclusions.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney
Departments of Child Health and Neurology, University of Missouri, 400
Keene Street, Columbia, MO 65211, USA
