Research on Pediatric Asthma and Pulmonary Diseases

Message from the Guest Editors

Air pollution, early childhood exposure to smoke, respiratory infections, pollen and allergies are triggers for asthma, one of the most common childhood diseases among children, meaning that this disease is a widely researched subject. This life-long lung condition affects children usually from an early age, affecting their capability of performing daily activities, which could potentially lead to a lack of social relationships, as well as mental health problems due to this life-threatening disease. Some of the symptoms include coughing, wheezing, chest tightness and breathlessness and while we cannot cure asthma, our job as pediatricians is to improve our knowledge and to carry out more research in pathophysiology and pathogenesis to help us to understand the disease better and to improve our approach to treatment and use of drugs to prevent flare ups.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney
