Unravelling the Association between Fear and Psychopathic Traits in Children and Adolescents

Message from the Guest Editors

Fearlessness is thought to play a critical role in the development and stability of psychopathic traits during childhood and adolescence. Although this has led to an unclear understanding of the effect that fear and psychopathy have on each other, this also highlights that we, as a field, are encroaching on something significant—“Unravelling the Association between Fear and Psychopathic Traits”.

This Special Issue is dedicated to elucidating the association between psychopathic traits (i.e., callous-unemotional traits, grandiosity, and impulsivity) and fear among children and adolescents.

This Special Issue prioritizes the submission of papers that implement cutting-edge research techniques, including the use of advanced technologies, analytical methods, neurophysiological assessments, and multidisciplinary research practice. This Special Issue will provide a unique opportunity for researchers to showcase ground-breaking research and contribute to the advancement of knowledge on psychopathic traits and fear. The Special Issue invites authors to submit original research articles as well as full-length review articles.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney
