Growth Through Adversity: Risks and Resilience in Child and Adolescent Mental Health

Message from the Guest Editors

Childhood adversity, such as exposure to maltreatment, household dysfunction, and community violence, detrimentally affects child and adolescent mental health. Gaining a better understanding of biological, social, psychological, and environmental factors that increase vulnerability to mental health problems and that promote resilience is critical to informing more targeted prevention and intervention efforts for children and adolescents. Therefore, this Special Issue's aim is to highlight innovative research that advances our knowledge regarding the influence of risk and resilience factors on the effects of childhood adversity on mental health during the developmental periods of childhood and adolescence.

We are particularly interested in publishing a collection of research papers that consider biological, social, psychological, and environmental risk and resilience factors, and encourage submissions from various disciplines and interdisciplinary teams (e.g., psychology, public health, psychiatry).

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney

Departments of Child Health and Neurology, University of Missouri, 400 Keene Street, Columbia, MO 65211, USA

Author Benefits
