Emergency Management and Treatment Strategies in Children Cardiac Arrest

Message from the Guest Editors

Emergency care of children is a challenging area for healthcare professionals. Children present particularities compared to adults, which make pediatric emergencies a very complex specialty, but one that presents numerous gaps in knowledge for conducting impactful research.

The aim and scope of this Special Issue is to have studies that focus on the management and treatment of pediatric emergencies or, in any case, on novel strategies in relation to the training of healthcare personnel or first responders focused on pediatric victims. Types of studies such as randomized clinical trials, observational studies, cohort studies and simulation studies will be welcome in this Special Issue, with the aim of presenting research that fills gaps in knowledge or offers original and novel strategies for the management and treatment of pediatric emergencies or in the training of healthcare personnel.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney
