New Trends in Physical Therapy for Children

Message from the Guest Editors

Physical therapy is one of the disciplines aimed at improving and maintaining the physical function of patients. In recent years, physical therapy has developed rapidly. Physiotherapy aims to restore capacity, function, and autonomy after a pathological process has occurred. Injuries or sudden trauma for children, adolescents, or young athletes can be caused by sports; choosing a multidisciplinary approach based on the combination of basic research, modern technology and the latest advances in biomechanics, pharmacology, and training concepts can produce the most effective rehabilitation process recovery. This Special Issue provides an overview of the latest developments in the field of physical therapy and its application in multiple fields, as well as being a good platform for the latest academic research results obtained in different fields of physical therapy for children and adolescents. We invite contributors to send original research articles and systematic reviews. We look forward to receiving your contribution.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney
Departments of Child Health and Neurology, University of Missouri, 400
Keene Street, Columbia, MO 65211, USA

Author Benefits

Open Access

— free for readers, with article processing charges (APC) paid by authors or their institutions.
