Current Treatment of Craniofacial Disorders in Orthodontics

Message from the Guest Editor

Orthodontic treatment for patients with craniofacial disorders, such as cleft lip and/or palate or Robin sequence, is an ever-evolving field. It encompasses a wide range of approaches, from initiating therapy immediately after birth using palatal plates to the comprehensive interdisciplinary rehabilitation process extending into adulthood. These complexities make treatment particularly challenging. The integration of CAD/CAM technologies into orthodontics has revolutionized the treatment of these patients. This technology enables the precise manufacturing of custom devices, enhancing treatment outcomes in terms of safety, time and cost efficiency, quality, and overall feasibility. This Special Issue aims to highlight interdisciplinary treatment outcomes for patients with craniofacial disorders, explore innovative and visionary approaches in their rehabilitation, and showcase advancements in the design and production of therapeutic devices. It will also address recent technical developments, potential pitfalls, and the lessons we can learn from our interdisciplinary colleagues.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney

Departments of Child Health and Neurology, University of Missouri, 400
Keene Street, Columbia, MO 65211, USA
