New Trends in Pediatric Orthopedic Trauma

Message from the Guest Editors

Pediatric orthopedic trauma has immense importance in the realm of children's health and wellbeing. Children are particularly vulnerable to orthopedic injuries due to their active lifestyles and developing musculoskeletal systems. The prompt and appropriate management of pediatric musculoskeletal injuries is crucial to prevent long-term complications, promote optimal healing, and restore function. Early intervention and comprehensive care can substantially improve the physical and emotional recovery of young patients, allowing them to regain their mobility, independence, and overall quality of life. Over the last few decades, pediatric orthopedics has witnessed substantial advancements, including improvements in diagnostic imaging and surgical equipment, advanced implant design, and the evolution of surgical techniques. The purpose of this Special Issue is to provide updated information and current trends in the treatment of pediatric orthopedic trauma, thus helping healthcare providers to stay current and provide the highest quality of care to patients.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney
Departments of Child Health and Neurology, University of Missouri, 400
