Craniofacial Deformities and Cleft Lip and Palate: Diagnosis, Treatment and Management

Message from the Guest Editors

While there have been significant advancements in medical and dental technologies in recent years, the application of advanced technology in cleft lip and palate (CLP) management still faces several challenges and limitations, particularly in children and newborns. Under the need for specialized equipment, employing digital technology, advanced surgical/ non-surgical techniques, and introducing innovative protocols are some key avenues to facing this challenge. Continued research and innovation are essential to overcome management challenges and advance the field of surgical and orthodontic care of CLP children. In this Special Issue, we explore the latest advancements in digital technology and innovative protocols for the treatment of children with cleft lip and palate, intending to revolutionize CLP management, offering more precise orthodontic, orthopedic, and surgical outcomes and improved patient care.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief
