

Special Issue

Contemporary Issues in Pediatric Dentistry

Message from the Guest Editors

This Special Issue will present information regarding a number of contemporary concepts, instruments, and therapies relevant to the current standards of oral healthcare for children. Evidence from recent studies, suggesting that dental caries and periodontitis may be regarded as infectious diseases that are initiated early in life, will be discussed. To assist parents in establishing the optimal opportunity for their children to remain free of the common oral diseases throughout their lifetimes, the topic will also include information about assessing a patient's risk for oral disease, using anticipatory guidance counseling, and promoting infant oral healthcare programs. This Special Issue will also provide information about newer conservative restorative concepts, pulp therapies, and certain esthetic dental procedures designed to help the pediatric dentist resolve certain oral problems in young patients. In this Special Issue, we will review manuscripts discussing Contemporary Issues in Pediatric Dentistry.

Guest Editors

Prof. Dr. Omar El Meligy

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief
