Research Perspective in the Clinical Management of Kawasaki Disease

Message from the Guest Editors

Kawasaki disease (KD) is a systemic vasculitis that primarily affects children under the age of 5. Coronary artery lesions are the most common complication of KD and can have a lifelong impact on affected children. This Special Issue aims to explore research perspectives on the clinical management of KD. Submissions are welcome on any aspect of clinical management beyond the standard treatment of high-dose IVIG and aspirin, including research articles, review articles, and case reports.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney
