

## Special Issue

# Dynamic Psychiatry and Psychotherapy in Children and Adolescent

### Message from the Guest Editor

Mental health disorders in children are generally defined as delays or disruptions in developing age-appropriate thinking, behaviors, social skills or emotion regulation. These problems are distressing for children and disrupt their ability to function well at home, in school or in other social situations. Most mental disorders in children inducing symptoms impairing their relations to themselves or to others, such as neurodevelopmental disorders, anxiety disorders, major depressive disorder and other affective or dissociative disorders can be addressed by various forms of psychotherapy, including psychodynamic therapy, at least as adjunct treatment. More broadly, it is largely considered that all forms of psychotherapy provide children with at least some form of “corrective emotional experience” with the goal of alleviating a child’s problems that interfere in their psychological wellbeing. Therefore, we set up this Special Issue with the aim of collecting papers on mental disorders in children and the intervention of psychotherapy which could be helpful for them.

## About the Journal

### Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.
