Advances in Pediatric Multisystem Inflammatory Syndrome

Message from the Guest Editor

In April 2020, United Kingdom health officials reported the first cases of what would become known as multisystem inflammatory syndrome in children (MIS-C). The children affected had various symptoms that emerged suddenly and then progressed rapidly. As word of the syndrome spread worldwide, more cases began to be reported, prompting widespread interest among pediatricians.

This Special Issue aims to help readers understand the various terms for inflammation, including hyperinflammation, multisystem inflammatory syndrome, autoimmunity, and autoinflammation.

The Special Issue is currently soliciting papers that present the latest scientific results in a practical manner. We are looking for articles that not only describe the findings of scientific studies but also provide insight into how these findings can be applied in everyday life. We believe that this type of translation is essential for making scientific progress accessible to a broader audience. In addition, we feel that this approach will help to promote public understanding and support for scientific research. We encourage scientists from all disciplines to submit their work for consideration.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney

Departments of Child Health and Neurology, University of Missouri, 400 Keene Street, Columbia, MO 65211, USA
