

## Special Issue

# Motor Development in Children

### Message from the Guest Editors

Correct motor development in children is essential to acquire all the motor skills necessary for independence in daily activities. However, alterations in this development are very common disorders throughout a child's developmental stage and can limit the acquisition of gross and fine motor skills. This Special Issue of *Children* focuses on the different alterations in motor development in children who present with some type of neurological pathology, such as cerebral palsy, autism spectrum disorder, myopathies, minor neurological dysfunctions, etc., or those who do not present with neurological damage but present deficits in motor development, such as children who are preterm or present with developmental coordination disorders, among others.

## About the Journal

### Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children’s health. We would be pleased to welcome you as one of our authors.
