Diagnosis and Management of Injuries, Fractures, and Complications in Children

Message from the Guest Editors

It is important to discover whether changes in fracture types and patterns occur among children and teenagers. Furthermore, infrequent injuries are associated with diminished experiences. As such, in an attempt to develop possible recommendations, it is important to re-evaluate and update old paradigms. Ultimately, this should lead to an update to common treatment guidelines and an improvement in therapies for the pediatric population across different age groups. It would be beneficial to share the data on pediatric injuries as well as the treatment strategies and approaches to dealing with complications. Aiming at highlighting strategies for the treatment of pediatric injuries and fractures, as well as the management of associated complications, this Special Issue welcomes basic research, original articles, and reviews. The types of studies we are soliciting are as follows: long-term follow-up (> 2a), epidemiological observation studies (>10 a), common injuries with large cohorts, rare injuries, new strategies, technical reports, and outcome data of treatment strategies and/or complication management.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney
Departments of Child Health and Neurology, University of Missouri, 400
