Non-communicable Diseases and Rare Diseases in Pediatrics: Management, Treatment and Prevention Strategies

Message from the Guest Editors

Non-communicable diseases (NCDs) represent a set of disorders resulting from the interaction of genetic, physiological, environmental and behavioral factors (physical inactivity and unhealthy diets, obesity and consumption of tobacco or alcohol), and are often associated with a long duration and slow progression.

Children affected by NCDs and rare diseases often face a lifelong challenge in managing and treating their conditions. Treating NCDs and rare diseases requires close cooperation between experts of various medical disciplines in an interdisciplinary setting.

This Special Issue provides the reader with an up-to-date overview on important progress in the diagnosis, management, complications, treatment and prevention strategies in children with NCDs and rare diseases.

Clinicians and researchers are invited to submit relevant original articles from both clinical and research fields, narrative and systemic reviews.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney
Departments of Child Health and Neurology, University of Missouri, 400
