Biomaterials and Biomechanics of Pediatric Dentistry

Message from the Guest Editor

Currently, we are witnessing a tremendous advancement in the biomaterials involved in dentistry in general. Increasing awareness about oral health across the ages and constantly evolving technology has brought numerous changes to dental therapy. Pediatric dentistry is no exception in this era of advancing dentistry, and thus, it also offers various therapeutic options in prosthetic, restorative, surgical or orthodontic areas. Restorative biomaterials have been revolutionized with the introduction of biomimetic materials, which promote the healing of dental tissues and remineralization. Similarly, prosthetic rehabilitation has grown with the use of newer biomaterials and technological advancements in the recording and translating of oral tissues into prostheses. Likewise, with the advent of elastomeric appliances, popularly known as elastodontics, has brought new impetus in interceptive orthodontics.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney
Departments of Child Health and Neurology, University of Missouri, 400
Keene Street, Columbia, MO 65211, USA

Author Benefits

Open Access

— free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, and other databases.

Journal Rank:
