

Special Issue

Advance Research in Pediatric Dental Disease: 2nd Edition

Message from the Guest Editors

Pediatric dentistry is taking on an increasingly important role in the dental work. Nowadays' advanced pediatric dental research has a very wide spectrum, offering, on the one hand, evidence on the efficacy of innovative technologies, and on the other data on how traditional therapies are still extremely relevant. This is true for different topics within pediatric dentistry, such as child's growth and development, behavior management in the dental environment, oral diseases diagnosis, prevention and treatment, and all issues related to special needs children. However, many areas of research on pediatric dentistry still remain to be explored. Some of the areas need to be further investigated in the scientific world include:

- New re-mineralizing agents for non-invasive treatment of early and advanced caries lesions; especially in young and children with special needs;
- Bio-active materials and their application in endodontic and restorative therapies;
- The role of functional foods and nutraceuticals to maintain and promote child oral health;
- Preventive orthodontic treatments and advanced behavioral management and painless cares.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Paul R. Carney
Departments of Child Health and Neurology, University of Missouri, 400
