Public Health and Preventive Medicine for Children

Message from the Guest Editors

Public health (PH) aims to protect and improve people's health and their communities, starting from childhood. PH strategies are obtained through research on diseases, healthy lifestyle promotion, and injury prevention and by detecting, preventing and acting on infectious diseases. The geographic coverage of a population may be as small as a neighborhood or as big as an entire country or world region, as the recent COVID-19 pandemic showed. PH involves preventive medicine (PM), which may start even before birth, through mother health assurance, promotion and education. All types of research papers are welcome, such as original studies, review articles (especially systematic reviews and meta-analyses), epidemiological experiences from the COVID-19 pandemic, as well as, all state-of-the-art methods including the role of nutrition in children health. Furthermore, the contribution of cutting-edge technologies such as artificial intelligence (AI) and mobile technologies in all aspects of PH and PM for children are of special interest.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief
